Essential Duties:

- Evaluate customer requests for new or modified security systems and products to determine feasibility, timeframes and compatibility with current systems
- Develop technical criteria, cost estimates, memorandums, specifications and assessments.
- Assist project managers with selecting, recommending, evaluating and researching alternate systems or products for implementing security systems design
- Develop complex information/decision-making systems that encompass diverse technologies (unified management software, access control, intrusion detection, video surveillance, streaming video, data, voice, wireless, sensors, door hardware, etc.), the evaluation, recommendation, and integration of these technologies into various new and existing sites and facilities, and the implementation of plans for systems growth, operations, and personnel requirements
- Develop system engineering documentation including requirements development and analysis, vulnerability and risk assessment and process management
- Have familiarity with the Construction Specifications Institute (CSI) Master Format (2004), and have experience in the development and creation of contract specifications
- Assist in promoting the firm's capabilities and services with the preparation of proposals, statements of qualifications and other sales related initiatives
- Make client presentations
- The successful candidate will be required to stay abreast of emerging technologies products/services, guidelines, standards and their applicability to potential projects
- Some travel will be required

Required Skills and Experience:

- The applicant should be a self-starter and be able to work autonomously or within a group
- Experience should include knowledge of technical, physical and operational security elements
- Have experience in designing and documenting physical security components, software, and systems including access control, intrusion detection, video surveillance, door hardware, wired and wireless security systems, security/intercom systems, structured cabling systems, and IP protocols
- Have the ability to apply advanced technical principles, theories, and concepts to the design, architecture, and implementation of physical security solutions throughout a diverse enterprise, while at the same time incorporating legacy systems into the overall system solution
- Be able to develop security policies, procedures and conduct security assessments
- Have excellent verbal and written communication skills, be comfortable with public speaking, have a desire to perform sales initiatives, and have a working knowledge of Microsoft Office including PowerPoint, Word and Excel. AutoCAD experience desired, preferably current
- Have a minimum of five (5) years of relevant experience in the physical security industry
